

Title: MANAGEMENT OF CORPORATE ENTITIES

ABSTRACT

Systems and methods are provided to facilitate corporate entity management. According to some embodiments, a user interface is provided including an entity selection  
5 area allowing selection of at least one corporate entity from a plurality of corporate entities, and a plurality of selectable elements, each of the selectable elements being selectable to cause presentation of an associated area, wherein an area associated with each of the plurality of selectable elements presents information relating to the at least one corporate entity and to the associated selectable element.
